

For immediate release - January 2017

The BODYGUARD creeper, for which Creepex Inc. detains a US patent and Canadian Patent, is a totally new approach in mechanics' creepers, which may well bring about a safety revolution for North American professional mechanics as well as the "Do-It-Yourselfers".

In short, the BODYGUARD is the first and only creeper designed with a protective framework allowing unrestricted arm movements, and strong enough to withstand the weight of a vehicle that might accidentally slip off its jack stands. Engineered to withstand the weight and impact of a falling vehicle, the BODYGUARD's built-in structure can sustain a constant load of 30 000 lb.

The BODYGUARD is mounted on three rugged casters that provide uncompromising sturdiness and stability. The 6" solid rubber tires wheels provide shock absorption and smooth ride when traveling over rough, floor grills or uneven surfaces. Wrist activated brakes will keep the BODYGUARD firmly in place and provide maximum torque power to the mechanic.

The soft comfortable ergonomic backrest has a 4 position adjustable headrest. A pair of tool trays positioned on each side makes it convenient for small tools and small parts.

Mechanics wont be left in the dark with a pair of L-E-D work lights, "Hasta la vista" extension cord! While the BodyGuard's design seem Higher than a regular creeper, it is not higher than the tip of the nose of a mechanic lying down on a regular creeper

The BODYGUARD is available only on-line at: [www.creepex.com](http://www.creepex.com)
